Completion of our solar drying plant in Bad Tölz (Germany)

The solar drying plant at the waste water treatment plant of Bad Tölz (49,000 PE) went into operation.

The drying hall is roofed with glass and contains 2 drying beds with SolarTiger®-equipment.

Our first Newsletter

To keep our customers and partners informed about our products and projects, we decided to launch a newsletter.

We hope you like it.

Remote Maintenance as Standard

In order to support our customers with the operation of their solar drying plant at the best, our SolarTiger®-equipment now contains a remote control by default.

This allows us to check the parameters of the drying and to help you to operate the plant in an effective and efficient way. Even if it is sited on the other side of the world we can support you in a timely manner.
